

austyle architectural hardware

# auSTYLE architectural hardware

The austyle philosophy demonstrates how good ideas become reality.

Every austyle product is designed and manufactured with an emphasis on quality raw materials, practical functionality and unique designs.

Whether the product is 304, 316 stainless steel or solid virgin brass, strength in foundation through the use of high grade raw materials ensures austyle products can withstand the tolerances required in all commercial or domestic, internal or external applications.

auSTYLE Architectural Hardware and Builders Choice Hardware are brands of Superior Brass. Established in 1982 and starting with a traditional range of 10 lever handles, the range now extends to over 3000 products across multiple brands and multiple market segments.

Austyle products are manufactured to exceed ISO9000 international quality standards and are mechanically and practically functional as well as simple and easy to install.

Our in house design team develops products that reflect current market styles and trends and many of our unique designs have design registrations and mechanical patents to protect their individuality.

Welcome to the austyle range of quality architectural hardware and a new approach in design innovation.

# Icon References

The Ball Bearing is the invisible hero of a friction free operation. The Stainless Steel ball bearing promotes smooth mechanical operation, durability and longevity. The Ball Bearing accompanies a four hour fire rating (Australian Standard # AS1530.4-1997 and BS476.). There are no assembled plastics or nylons in the austyle lever mechanisms.

Quality is never an accident, it is the result of intention, innovation and skillful execution. When the base materials used in manufacturing are of a high standard, the end product lends itself to comprehensive long term mechanical confidence. Our products will simply work and accompany a 7 year residential warranty.

Many items in our range are manufactured using 304 or 316 stainless steel where commonly these types of products are usually manufactured by our competitors in zinc or steel. Stainless Steel offers significantly superior durability and reliability whether used as the base material of the product structure or within its mechanism.

The PVD Brass Finish offers a traditional appearance with a 50 Year Anti-Tarnish warranty against, pitting, discolouring and corrosion. If your project/client has a traditional brief/style with all the benefits of modern durable mechanical operation, this is the product for you. ([www.superiorbrass.com](http://www.superiorbrass.com))

Many austyle locks have been fire tested in Australia and have passed either 2 and 4 hours in simulated fire conditions. The rating refers to the fire test only. Installers and specifiers should verify and ensure the appropriate lock meets the appropriate operational building code or fire door requirement.

The austyle ball bearing mechanism, myLOCK and Quadlocks are patented which protects its exclusivity, individuality and uniqueness. Choosing an austyle patented product ensures you're purchasing a product designed in Australia for the Australian market.

All austyle lever handles and heavy duty passage latches have accompanying long term mechanical warranties. After correct installation, you can relax with long term confidence that our product will simply continue to operate as it did on day one.

Austyle passage sets have a unique tamper proof mechanism. When installed correctly, the external lever will not have a visible screw head under the concealing ring. This prevents the handle being tampered with and removed from the external side to gain internal access.

## THE AUSTYLE DIFFERENCE IS AS SIMPLE AS 1-2-3

1

The Ball Bearing mechanism is the invisible hero of a friction free operation.

2

The Stainless Steel ball bearing mechanism promotes smooth mechanical operation, durability and longevity.

3

The Ball Bearing mechanism accompanies a four hour fire rating (Australian Standard # AS1530.4-1997 and BS476.)

Contact one of our distributors to touch and feel the auSTYLE lever handle difference in store.

## Security

**ALL IN ONE Integrated Security:  
ROLLER LATCH, PRIVACY and DEAD BOLT.**

Upgrade & Improve Your Entrance Security Without Changing Your Door.  
The new stainless steel body is designed to retro fit into the cavity of 85mm entrance mortice locks.  
Upgrade the security in your home without the need to change your door.

**304 Stainless Steel**  
The casing, privacy & dead bolts, roller latch, spindle follower, internal components, faceplates and striker plates are manufactured in 304 high grade stainless steel for superior durability.

**The Indicator Snib**  
The direction of the snib provides a visual reference to indicate whether the privacy bolt (and the door) is in the locked or unlocked position.

**Adjustable SS Heavy Duty Roller Latch**  
After installation from the front of the roller latch; easily adjust the spring tension and projection of the roller to suit your desired opening tension.

suits austyle independent CAM cylinders only

**Keyless Locking**  
Using the snib when home will prevent anyone opening the door and walking in. It's a quick and simple locking function for every day use and works independently of the dead bolt.

**High Security Dead Bolt**  
Engage the dead bolt for the ultimate level of security when you're out of the house or away on holiday. A solid 304SS bolt that is 40mm high and 10mm thick and extends 85mm across the door jamb and back into the case will give you security and peace of mind.

**Independent CAM Cylinder & Integrated keylock**  
The independent CAM cylinder allows you to leave your key in the cylinder while still allowing its use from the outside of the door. Using your key to enter will simultaneously disengage both the privacy and dead bolt so you can enter in auSTYLE.

### WHY ARE AUSTYLE 304 STAINLESS STEEL SECURITY LOCKS BETTER?

Simply put, stainless steel offers significantly better durability and strength when compared with commonly available zinc or steel structured locks. Stainless steel contains higher levels of nickel providing superior corrosive resistance. Our locks are ideal for heavy duty, commercial applications and whenever superior quality and reliability is a significant consideration.

## Finishing Options: Integrated "Keyless" Snib & Escutcheon

Create a clean minimal entrance using a snib & escutcheon set to operate high security locks for front/external doors.

The snib operates the lock in the same way a conventional lever handle functions, opening the door from the inside with a turn of the snib.

Externally, use a key to simultaneously retract the latch and open the door.

Simple. Practical daily functionality.

## Snib & Escutcheon Sets
